

Hi Useful guide for all you XDVDMulleter newbie's written by Santa90.

How to install XDVDMulleter

1. First you must download .NET Framework Version 2.0 or newer. (Link at bottom on page)
2. Extract the XDVDMulleter RAR file using a tool such as WinRAR
3. You can now run XDVDMulleter

Finding your way round XDVDMulleter

- View ISO details Can be used to fix any stealth issues
- Build/Rebuild an ISO Used to convert Xbox1 games for Xtreme Firmware
- Extract/Browse files in ISO Explore the data in your game Image
- Advanced ISO Creation
- Batch ISO Operation Check multiple games stealth and dump stealth files at once
- Misc Functions
- Settings

In this tutorial we will be using

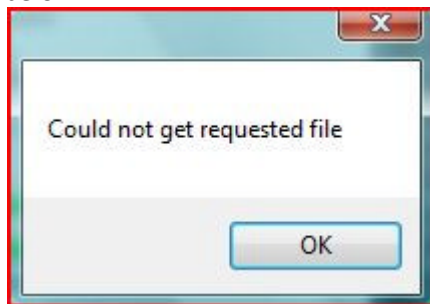

- View ISO Details
- Batch ISO Operation

The software you will need to do these tasks

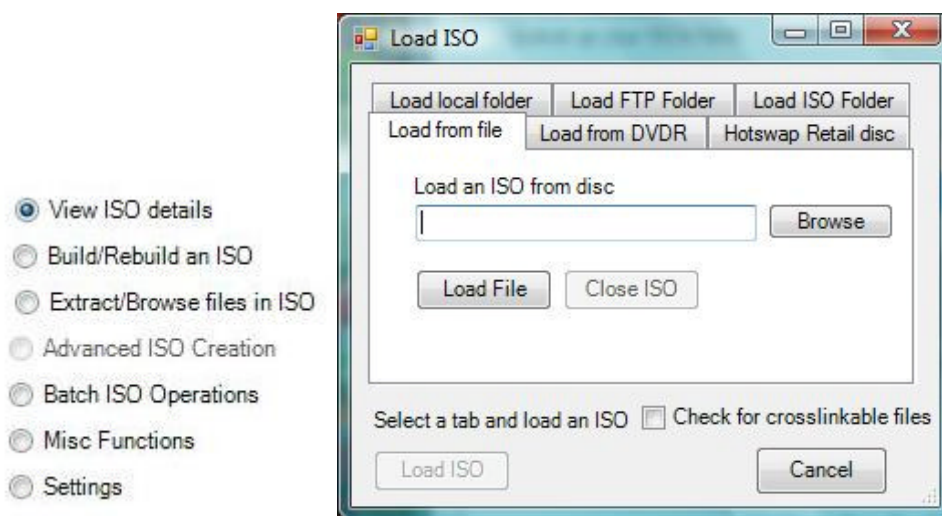

- Microsoft .Net Framework Version 2.0 or newer
- XDVDMulleter Beta 9.7 or newer
- ISO Video Pack (Can be downloaded from Xbins)

Auto Fix your game (Will fix stealth and video problems)

Auto fix will only work if the game is in the online stealth database if it isn't you will get the error below.

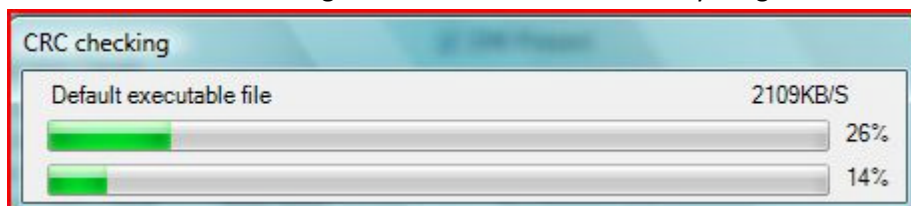

1. Select View ISO Details then Load the ISO Image of the game with Mulleter

2. Select the CRC Checking Tab

3. Click "Auto Fix" You will get the box below wait for everything to finish

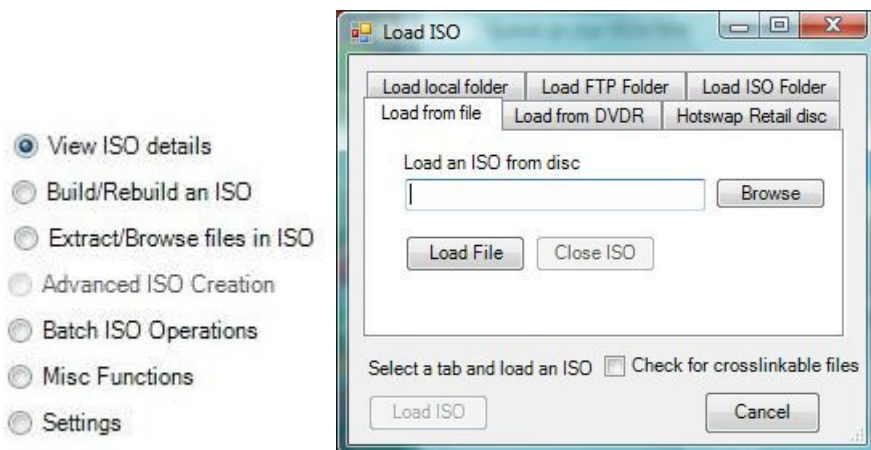

4. Check the iXtreme compatibility box is ticked and your good to go

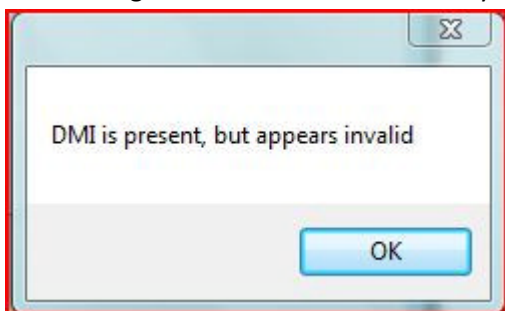

Fixing Stealth File Errors (Games not booting on iXtreme FW)

1. Select View ISO Details then Load the ISO Image of the game with Mulleter

2. You will get some errors like below saying Invalid DMI & PFI

3. Select the "Stealth Tab" Then select insert Stealth

4. Select the stealth files for that game

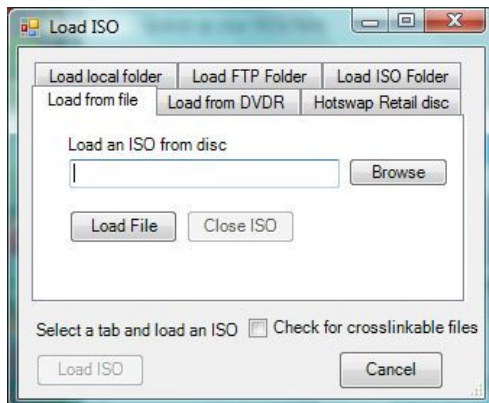

Mulleter has now inserted the stealth files double check the game is ready by checking the iXtreme Compatibility box is ticked.

Fixing Invalid Video Data Errors

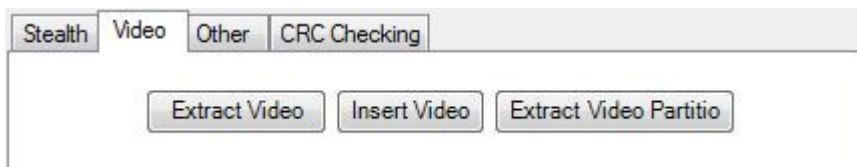

1. Download the video pack for Mulleter and extract the files to the Mulleter dir
2. Load Mulleter

- View ISO details
- Build/Rebuild an ISO
- Extract/Browse files in ISO
- Advanced ISO Creation
- Batch ISO Operations
- Misc Functions
- Settings

3. View ISO, then Load ISO Image

4. Select Video Tab then Insert Video

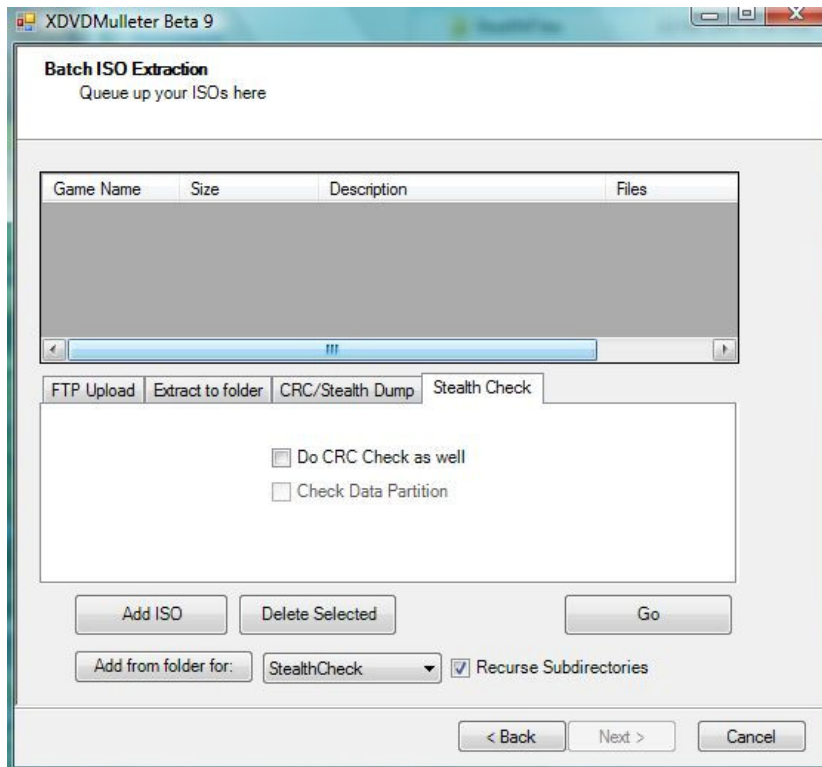

You must have the correct PFI file injected first as it grabs the need information for video files from the PFI file

5. Check the iXtreme Compatible tab is ticked and your good to go.

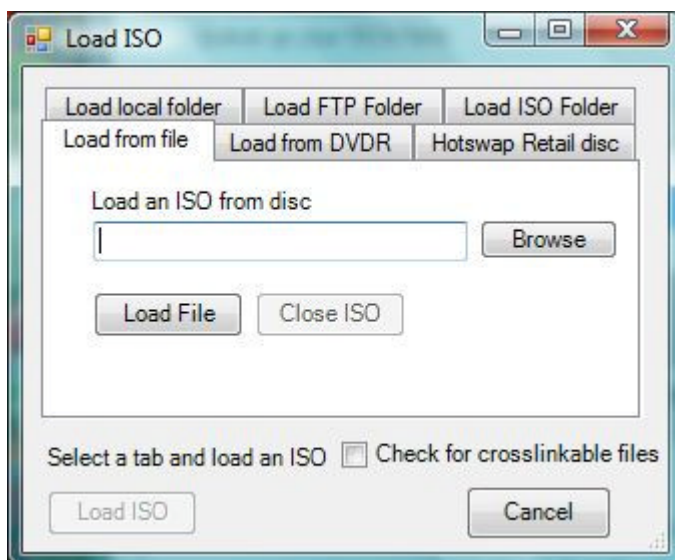

Batch Image Stealth Checker

1. Load Mulleter then Select “Batch ISO Operations”
2. Select Stealth Check Tab

3. Now Click Add ISO then load the ISO

4. Once you have loaded all the game images you want to check select GO

If any of your images failed the stealth checking just fix them using “View ISO Details”

Where can I download stealth files?

<http://360patches.com/>

Where can I download XDVDMulleter and the video pack?

XDVDMulleter: <http://www.devilsp3.centelia.net/360stealth/>

Video Pack: <http://files-upload.com/files/429238/VideoPack.rar>

I keep getting application error when I try to run Mulleter how do I fix this?

You need to download and install .Net Framework using the link below

http://filehippo.com/download_dotnet_framework_2/

I have already burnt the game and it won't boot how can I fix this?

You will need to copy the game back to your computer using CloneCD then fix using muleteer.

I have an original game how can I upload the stealth files to the online stealth Database?

Download the up loader tool from here <http://tinyurl.com/yslmcy/>

What software can I burn with?

You can burn your games with Xbox Backup Creator or Imgburn a guide for both of these can be found at Xbox-Scene.com

What's the best media and drive to burn with?

The best media are verbatim dual layer and a pioneer burner. Burn at 2.4x

Do I need to mod my console to play backup games?

Yes you need to flash your Xbox 360 drive with C4EVA's iXtreme firmware. Check out textbooks tutorial <http://tinyurl.com/t6e9u>
