## BACKUP and FLASH OF THE NAND USING THE CHIP INFECTUS

### IMPORTANT:

Run to the letter the instructions below, a minimum error or the premature cancellation of NAND make console UNUSABLE.

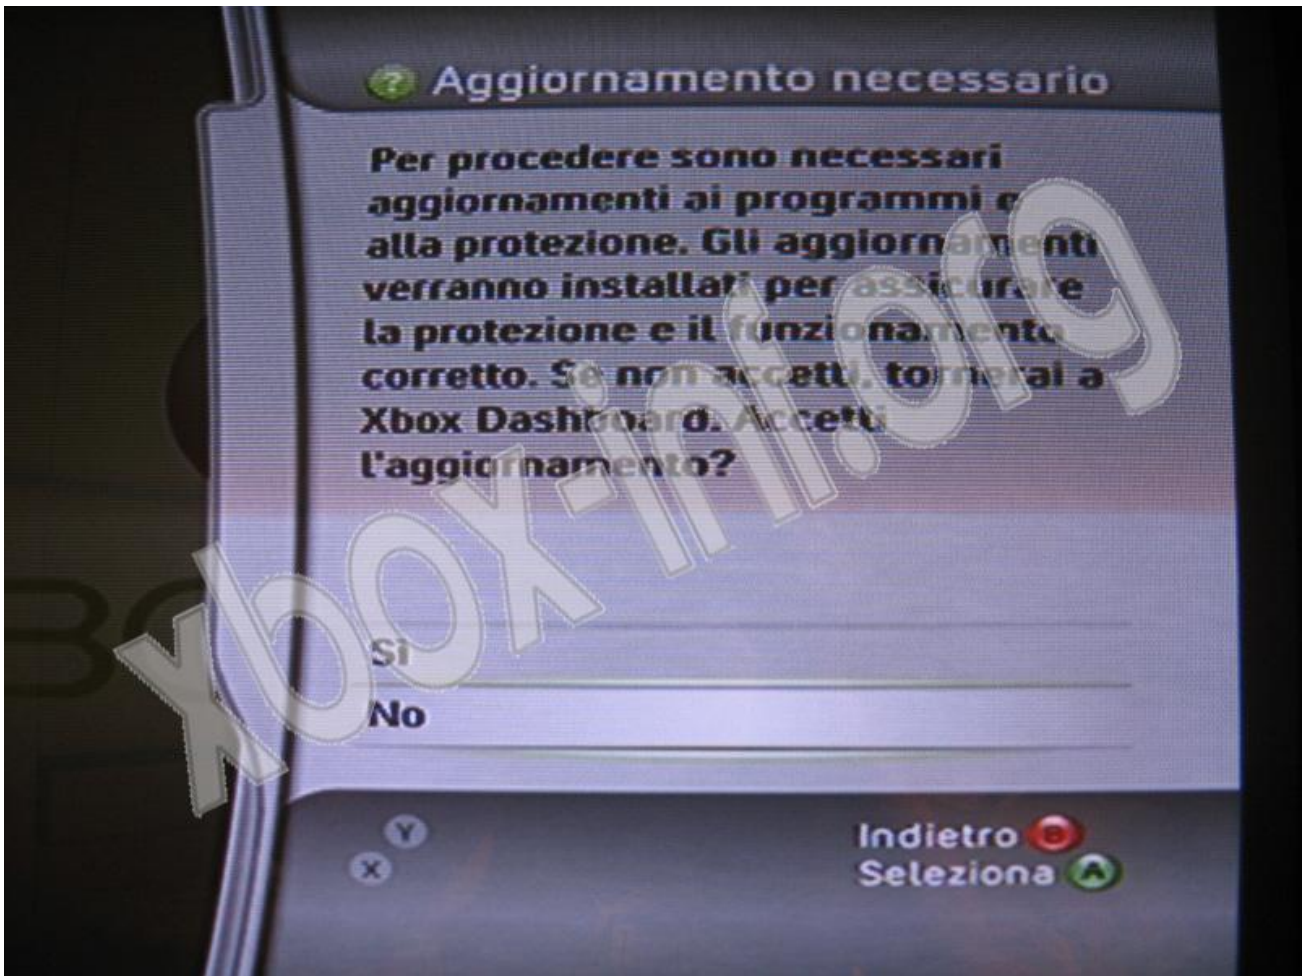

The procedure that was to run INVALID COMPLETELY guarantee ORIGINAL

We monitor now that we Dash version of our consol, to learn how to determine your version of Dash do not have to  
Just switch on the console and go to the system settings, you will appear on "D" and "K" to the maximum version 2.0.4532 or 2.0.4548  
(Or earlier ... in my case 2.0.2858):

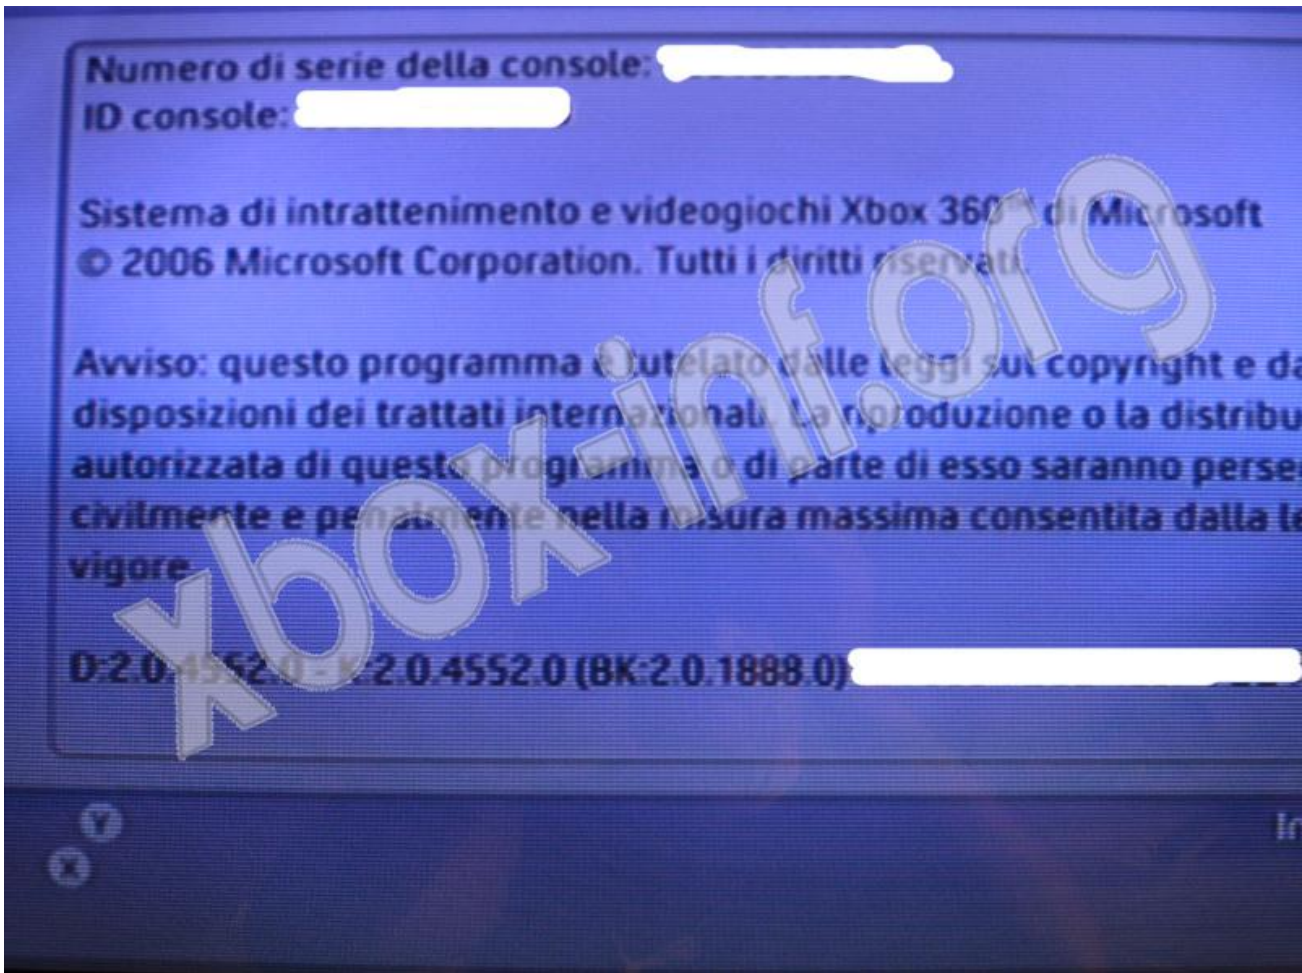

We connect our hours console Xbox Live-or assemble un'Hdd belonging to a recently updated console-on Xbox Live ...

We see a demand for Update that we absolutely accept:

At the end of the update will restart the console, if we now let's check the version of Dash will notice has changed:

This is therefore the time to launch a beautiful Downgrade of Xbox 360 Dash ... To do so we must always have the console in the following conditions:

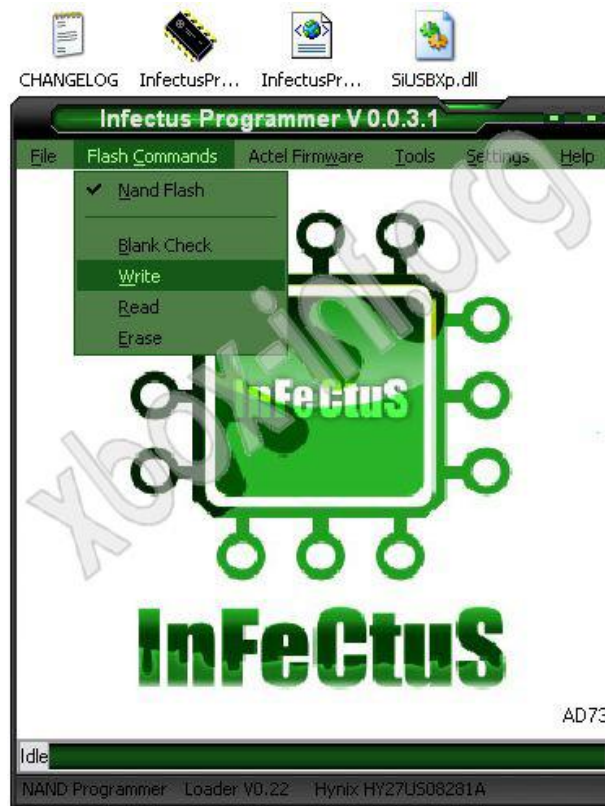

- Mini USB cable connected to Chip Infectus but NOT PC
- Video cable connected to the console (there is no need to be connected to TV)
- Console and PC possibly connected to an uninterruptible power supply
- Feeder connected to the console but not the outlet (because the NAND is always encouraged to console Spenta)

Connecting now to our current Xbox 360, accendiamo and connect the USB cable to our PC, once the NAND is detected going to proceed

"Flash Commands" and the launching Option "ERASE" waiting and that the program will end:

Without touching anything back on "Flash Commands" option and launching the "Write" waiting and that the program will end:

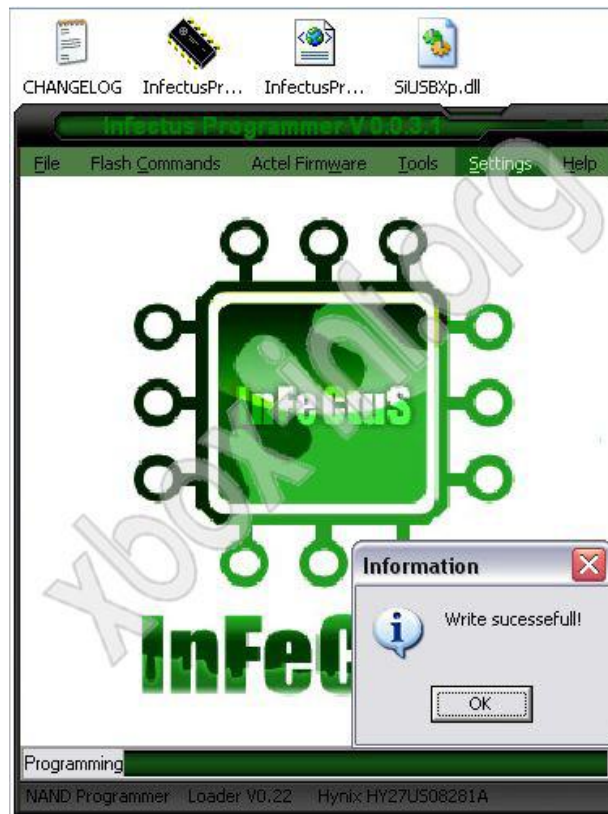

We will select our file of NAND Backup:

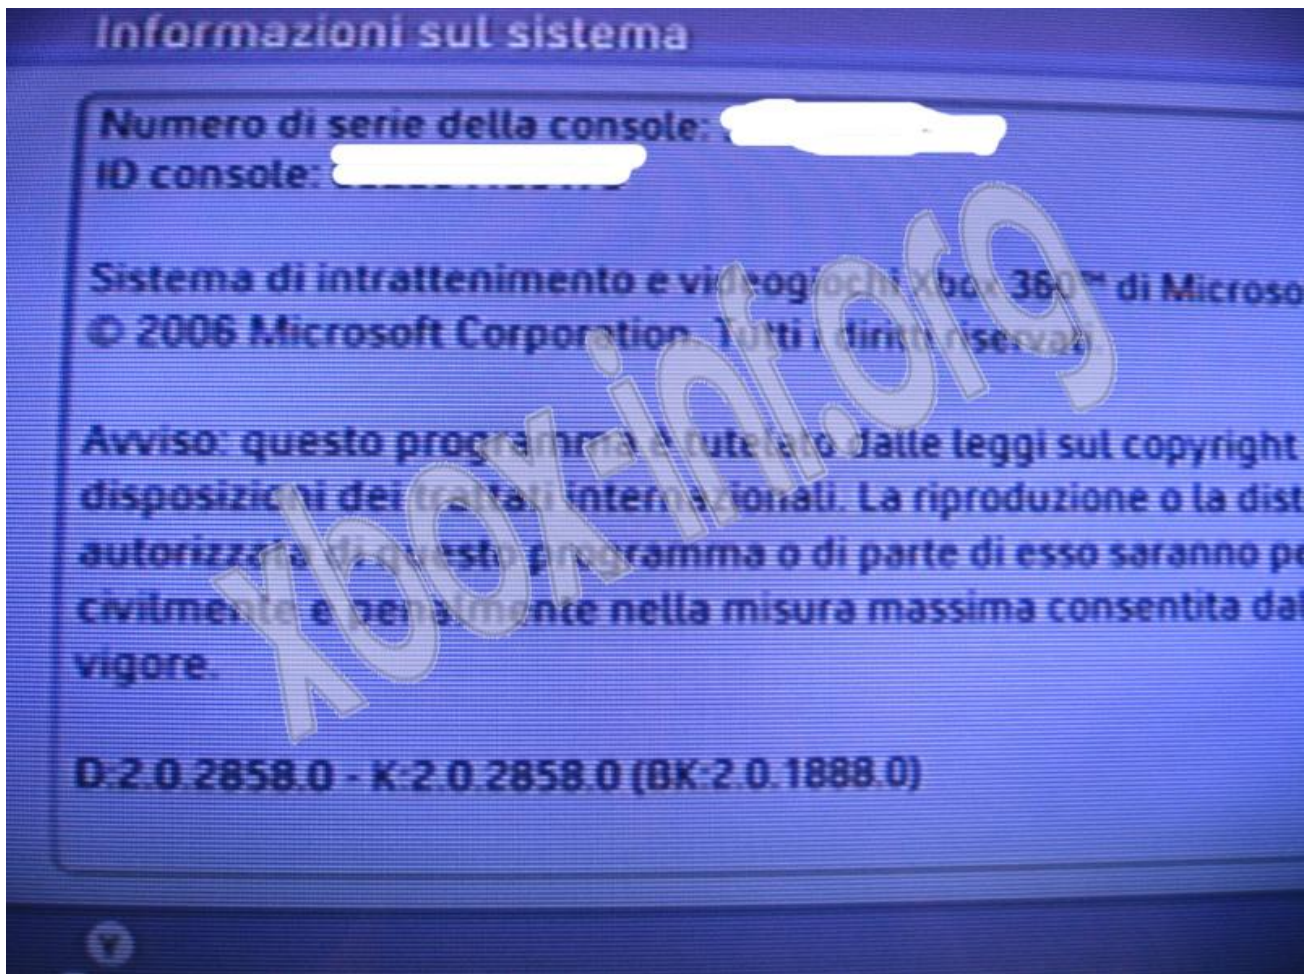

And expect the program to rewrite the end of our NAND console:

A write finished turn off the console, we drop the USB cable from the chip and we verify the success of Downgrade ... If all went wrong for going on system settings, you will appear on "D" and "K" to the maximum version 2.0.4532 or 2.0.4548 (or earlier ... in my case, the 2.0. 2858):

Good, the downgrade has succeeded perfectly, close console and enjoy.
