## BACKUP and FLASH OF THE NAND USING THE CHIP INFECTUS

**Important :**

**Follow to the letters the instruction reported , one Minimum of error or deleting of the NAND will cause the damage at the console**

**The stepes that we following broken the guarantee of the console**

**For run the backup of the your NAND we must having a console with this condiction :**

- Mini USB Cable connected to the CHIP INFECTUS not at PC
- Video Cable connected at console ( is not required the connection at TV)
- console and pc connected with Uninterruptible Power Supply
- connect this hardware at console not at the outlet ( because the NAND must be powered at console power off)

**To proceed with this:**

- Download and installed the Programmer (version 0.0.3.1 or higher) that are here: [CLICK](#)
- Downloaded and installed the drivers that serve to recognize the Infectus System: [CLICK](#)

**Connecting now to our current Xbox 360, turn on and connect the USB cable to our PC, then start of the Programmer**

**Infectus that will detect the chip mounted and our NAND if not detected anything double the welding:**

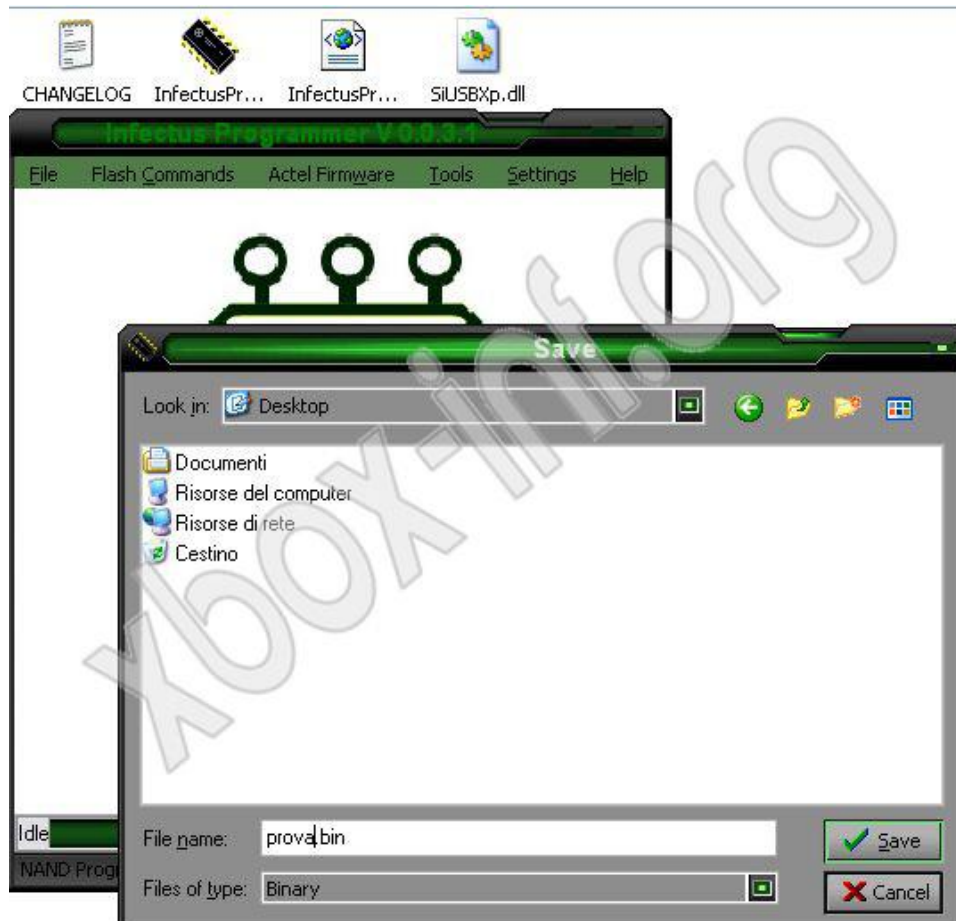

It may happen that there be prompted to update the chip ... No problem, let the Programmer work,  
End the update turn off the console, disconnect the power for about ten seconds and proceed to the survey again as we did before.

Once the NAND is detected proceed going on "Flash Commands" and the launching Option "READ":

The programme will ask us to save the backup NAND we will create:

Then begin reading:

A process finished, we can control where we saved our NAND Backup and find a file. Bin the size of 16.5MB:

Perfect, we can now proceed to the next step ... Update or the Dash and the subsequent Downgrade to this version just saved ...
