## TUTORIAL FOR INSTALLATION OF THE CHIP INFECTUS ON THE BENQ READER

Then you will be shown the way to the first reading FW inside of your reader Benq and then one for re-typing.

First you must:

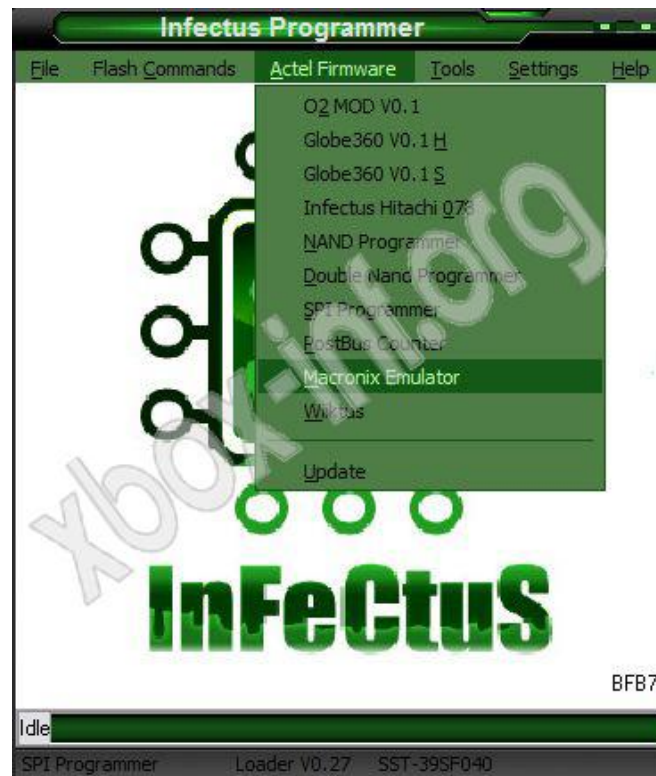

- The download and installed Infectus Programmer who are here: [Click](#)
- Downloaded and installed the drivers that serve to recognize the Infectus System: [Click](#)

Turn your console Infectus connect to the USB port and start the program (if we are being asked to update the chip loader accepted):

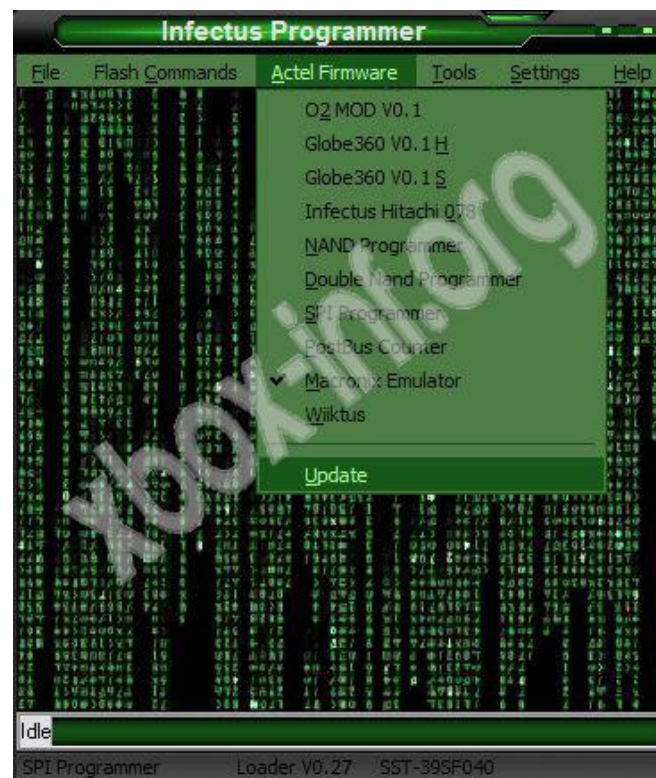

Once finished Update loader inside the chip go on "Actel Firmware" and select "Macronix

Emulator":

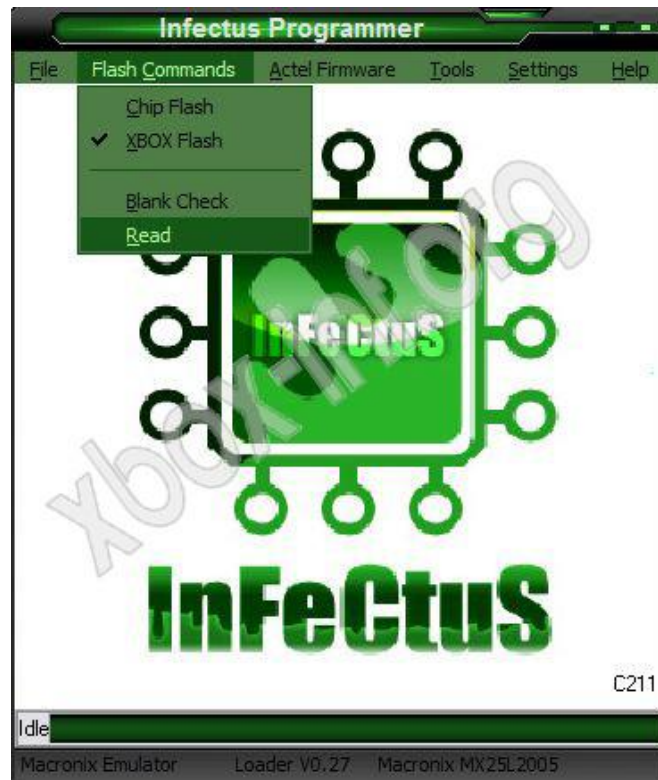

Always on "Actel Firmware" select "UPDATE" and await the end of the programming:

Once programmed our infectus, we go on "Flash Command" and select "Xbox Flash":

Also from the same menu we run the command "READ":

We decide where to save the backup of our original FW::

And expect the reading program ends.

We now turn to 'insertion of FW hack on our reader, to make things we need:

- Package available regarding FTP Benq iXtreme of Xbins

We back up our original Fw previously extracted and the place within the folder BENQ 1.X and iXtreme Launch program "Make iXtreme Firmware":

Nome	Dimensione	Tipo	Data ultima modifica
fw		Cartella di file	28/10/2007 2.55
FIRMT00L	28 KB	Applicazione	27/10/2007 13.50
Make iXtreme firmware	1 KB	Script di comandi Wi...	28/10/2007 3.03
orig	256 KB	BIN File	28/10/2007 10.48
ReadMe	2 KB	Documento di testo	28/10/2007 3.24

The process will be fully automated and eventually would generate the new FW Hack:

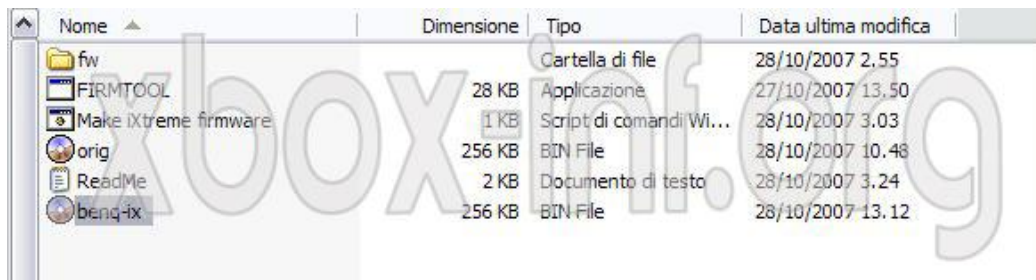

```

C:\WINDOWS\system32\cmd.exe

-----
|          firmtool v1.0 by caster420          |
-----[360mods.net]-----

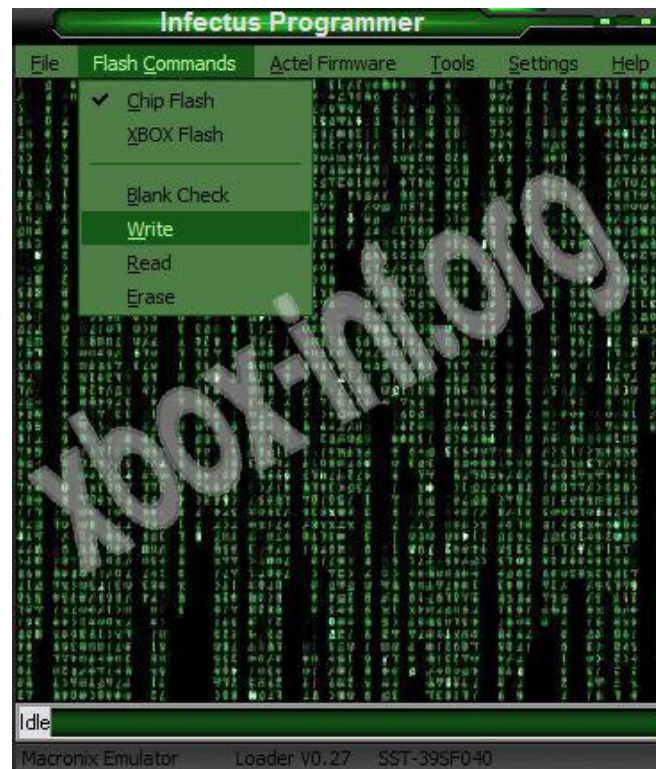

Drive Key: C5F491682501ACAB7CC70E5062DD9EAE
Original Firmware Version: BenQ UAD6038-64930C
iXtreme Firmware Version: BenQ UAD6038-64930C
*** SUCCESS ***
Drive key copied.
Drive serial copied.
Your iXtreme firmware is now ready to be flashed!
*****
BenQ iXtreme v1.1 firmware created: benq-ix.bin
*****
Premere un tasto per continuare . . .

```

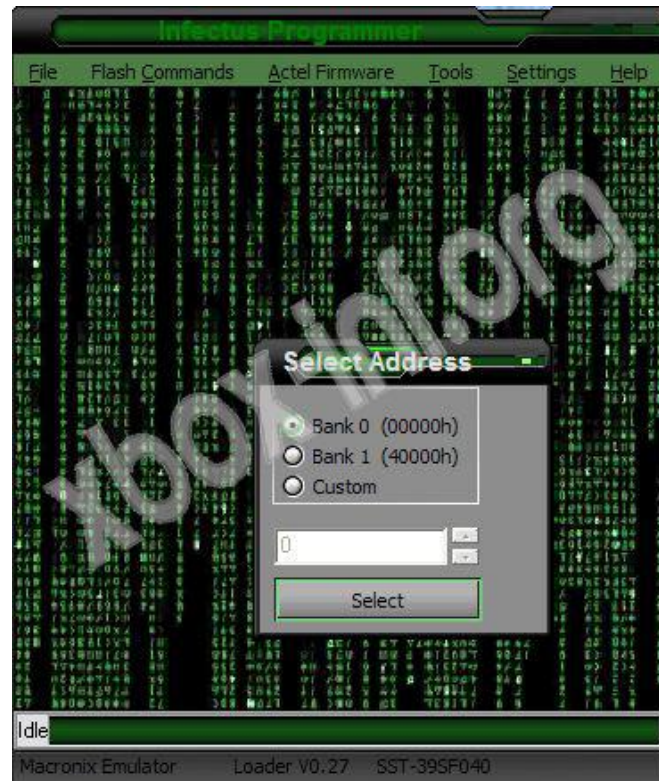

Take the newly created FW and proceed with the upgrade of the chip

First bootstrap your infectus programmer and go on "Flash Command" and select "Chip Flash \ Write":

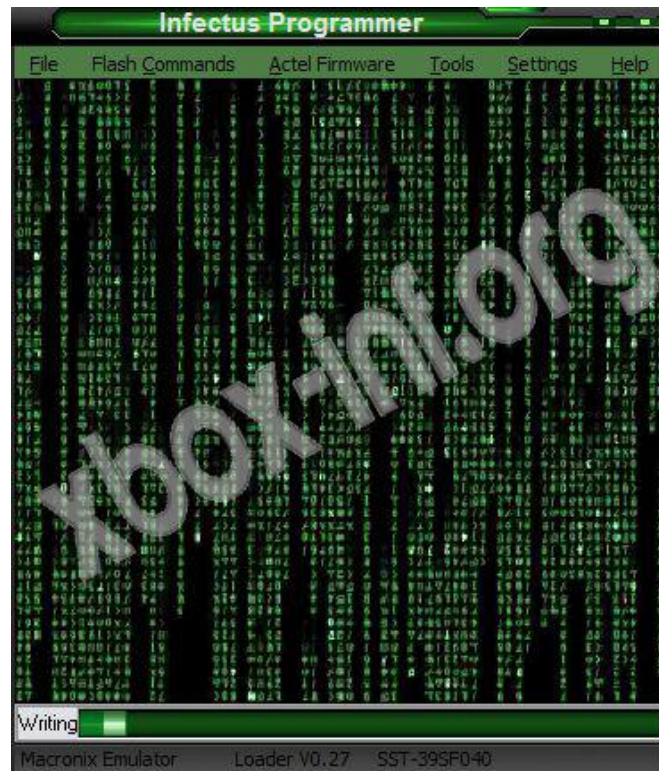

We select our newly created Hack FW:

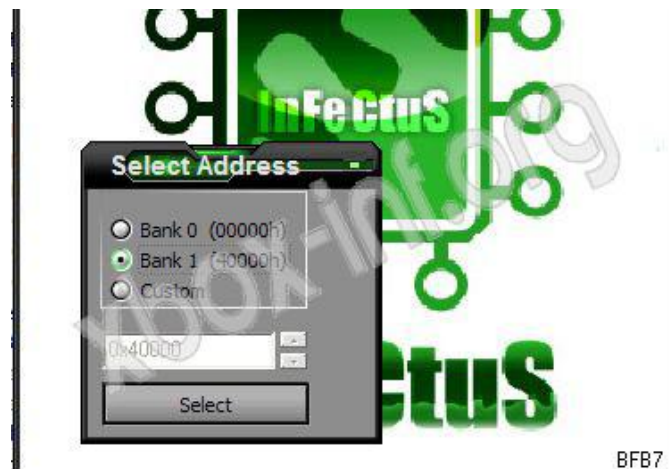

And we start writing:

If you have a chip Infectus 2 can decide to flashing the second bank available in order to have the console Fw 3, To do this you must not do nothing but follow the same procedure done before, only that when you are asked to choose bench, Select the bank 1:

Done, our reader Benq he said that the Fw iXtreme dedicated, there remains more than reassemble everything on the console and Test for proper operation.

I briefly illustrate the operation of the two seats on the board Switch external dell'Infectus 2: The switch selects the number 1 bank to start the chip (starting with the first or second Fw Hack)

The switches select the number 2 or less enabling the chip to decide whether to do it or leave it remain perpetually Off despite the kind of start that you do.

For the record the operating table is so divided:

- Switch to OFF 1 Fw start on the banck 0
- Switch1 ON start on the banck Fw 1
- Switch 2 OFF Infectus operation and start with regular chips or disabled with slight pressure was Ignition

And chip enabled pressure with two seconds of the power button  
- Switch 2 ON Infectus DISABLED COMPLETELY

I remind you that all changes were to be made of Switch ALWAYS to Console Off

-
